

in which layer @controller is used in spring mvc	web/presentation layer	
where can we find the settings .xml page	maven_folder/conf	
in hibernate which of the following configuration are correct	configuration cfg = new configuration().config(myconfig.xml);	
given a bean.xml file... <bean id = "countrybean".....which of the following is true	both option 1 and option3	
which of the following ... @entity class candidate(@id private int cid;private String cname;private string course	list<candidate> getcourse	
How to map url to a function defined inside Controller class	requestmapping("url")	
which one of the following is not true about spring	all Spring classes must extends the httpServlet class	
Assume necessary springboot package imported assume that samsung and battery are valid....	2 (hd 1 and battery)	
in which config file do we need to add the required dependencies	pom.xml	
what is the return type of findall method in crudrepository	java.lang.iterable	
which of the following statements are true about restcontroller annotation	it is the combination of controller and responsebody	
which of the following tag is used to include compiler source and target version details	plugins	
what is the type of object returned by springApplication.run(app.class , args)	configurationApplicationContext	
which of the following environment variable should be set to the maven installable	maven home	
department d = session.get(department.class,90)...	prints an empty object with 0 value for department no	
in the below code what is the value returned by the hellomethod indicates ...return "hellopape"	it is the string value to be displayed	
how to pass additional configuration information to a springboot project	using application propertirs file	
the below code is the example for query<product> query = s.create query	named paramenter binding	
POM can manage	all the above	
predict the no of objects that would be created for the below@Component ...candidate c3 = context.getBean(candidate.class)	answer is 3	
in the below code snippet what is the status of object session session = sf.opensession().....	transient	
which of the following is the correct code to load the configuration file called beans..	both A and B	
Which of the following scope creates new bean instances.for every new request made for that object?	Prototype bean scope	
@springbootAplication annotation is a combination of which of the below set of annotation	@enable auto cofiguration @ComponentScan @onfiguration	
which of the following is the correct root tag in bean configuration beans.xml	<bean></bean>	
In hql, named parameters are identifiers of the form in the query string	:name	
While creating a spring mvc maven project in eclipse, what archetype	maven-archetype-webapp	
which of the following is an in memory database	h2	
. which of the below configuration in web.xml will direct	<webapp><servlet> <servlet name> springmvc	
which of the following will enable Expression Language in jsp	<%@page isELignored false	
upon initialization of a dispatcherServlet	[servlet-name]-servlet.xml web-inf	
in spring mvc, which of the following annotaion is used in the service/business layer?	@service	
which of the following tag is used to include compiler source and target	plugins	
Predict the output department d = session.get(department....	prints null	
where can we find settings.xml file	maven_folder/conf	
which of the following is the correct way to setEmployeeID for Employeebean class	employeebean e1 = new employeebean(); object.setemployee	
which of the following maven command is used to run the test cases	None option D	
which object is responsible for managing beans and their dependencies.	spring IOC controller	
. what is the type of object returned by springApplication.run(app.class, args)	ConfigurableApplicationContext	
which of the following statement is true about maven tool	it can generate documentation from	
For an entity class employee(id, name ,salary) which of the following method is valid method in crudRepository	findByName	
Which mechanism that spring has always provided for dependencies either by type referencing or by name referencing	autowiring	
What is the scope of bean objects created in spring mvc container web application context.	session scoped	
In springboot, where do we need to specify the h2 database url	in application.properties.file	
In the below jsp code, what should be inserted in line 1 to display the output correctly by line 2.	<%a page isELignored = "false" %>	

An object _ is if it has just been instantiated using the new operator and it is not associated with hibernate session	transient	
Which of the following is the valid attribute in bean tag?	all the above	
Which of the following annotation is used in the request handling method to refer to the named model attribute?	ModelAttribute	
Which of the following provides integration layer with hibernate	Spring ORM	
which fo the following is the correct method signature for selecting records candidate entity, whose score is > the given value.	List<Candidate>findByScoreGreaterThan(double score);	
In spring boot, how can we change the port number of the embeded tomcat server?	give server port = NNNN in application.prperties	
If the object with given id is not available in database, load method gives the following exception:	ObjectNotFound Exception	
Which of the following are methods of dependency injection	option 1 and 3	
Which of the following code will take us to the view Showdate.jsp along with the model "today's date"	("showDate","d1",d)	
Which of the following code will take us to the view ShowTime.jsp along with the model "current system time"	("ShowTime","t1",t)	
Which of the following is a spring module?	all of the above	
which of the following is the correct method signature to delete the records of the candidate entity whose score is 0?	List<Candidate>deleteByScore(double score);	
which of the following is the correct method signature for selecting the records of the candidate entity,based on given course?	List<Candidate>findByCourse(String course);	
which attribute of Property element is used to inject another bean object?	ref	
which of the following statements about front controller in spring mvc is true?	It is a design pattern and DispatcherServlet acts as front controller	
which of the design patterns help achieve loose coupling in Spring?	Dependency injection	
In hibernate,which annotation is used to mark the class an entity Bean which is ready for object relational mapping operations?	@Entity	
Which of the below is the correct location of Maven's local repository?	C:\Users\<UserName>\m2	
Which of the following refers to the id or name of the maven project?	artifactId	
In hibernate,the_option turns on automatic generation of database schemas directly into the database	hbm2ddl.auto	
Which of the following is true about maven tool ?	it can generate documentation from the source..	
which of the following annotations is used in spring mvc to indicate the classes at persistent layer which will act as a database repository	@repository	
which of the following statements is true about Rest controller annotation ?	combo of@Controller &@Response Body	
<context:Component-scan bas-package:"com.wipro"/> tag ?	it tells spring which packages need to be scanned	
Which of the following statement is true about ClassPathXmlApplicationContext in Spring?	loading the definitions from the given xml configuration file and automatically refreshing the context	
What is the order of bean creations based on the given configurations?	depends on attribute = OrgCnn-->marketing-->sale	
To perform dependency injection using @autowired that bean class must be annotated with _annotation	@Component	
which of the following is the correct property value to specify h2 database name in application properties file?	org.hibernate.dialect.H2Dialect, spring.database	
which of the following attribute of spring form tag is used to expose the binding path referencing the bean class object?	commandName, modelAttribute	
What is the role of InternalResourceViewResolver in Spring MVC?	It is used to resolve the logical url to physical url	
which of the following methods are defined in the org.hibernate.Transaction interface	Both begin() and commit()	
which of the following is true about <property name= hibernate.hbm2ddl.auto >create </property>	validate	
which of the following is correct method signature to delete the records of the candidate entity whose is 0	List<Candidate>deleteByScore(double score);	
what does the following bean configuration mean? <bean id="emampleid" class ="exampleBean"> <property name="email value="">	exampleBean.setEmail(null)	
while creating a table from the below mapping and using hbm2ddl.auto @column(name="singer_note") private String singerNote	255	
which of the following is correct method signature for selecting the records of the condidate entity based on given course	List<Condidate> findByCourse(String course);	
in hibernate ,which method is used to insert new records into database?	save() or persist()	
in spring how many methods of injecting dependency available	ans is 3	
dependencies on external jar files of your project can be injected by the tag	use build path of IDE	
Query<Product> query = s.createQuery(""from product where.....	Named Parameter binding	
which of the following attributes of the <bean> element	all the above	
hibernate needs to know how to load and store objects of the persistent class.....	Hibernte mapping	
which of the following provides dependency injection feature	Spring core container	
repeated		
which of the following statements is true about RestController annotation?	<id name= "property-name" column="col-name">	
which of the following is true about restcontroller annotation ?	It is a combination of@Controller and @ResponceBody	
which of the below configuration in web.xml will derect all the requests to the front controllerin in application developed using Spring MVC		

Which of the following statements are true about the dispatcherServlet	All of the above	
Given a sql table as below SQL>desc student_tbl; and an equivalent student class which is mapped to it using xml mapping. student.hbm.xml.	yes the mapping will work fine.	
what is true about @RequestMapping annotation in spring MVC	Both A & B	
which of the following attribute Technologies support by spring MVC	all the above	
select the correct option based on .. configuration cfg = new configuration();cfg.configure(hibernate.cfg.xml);....	it will save both object into the employee table	
which of the following are the view technology supported b spring MVC	all the above	
which of the following statement are true about Hibernate mapping with annotation	all the above	
predict the output. helloworldapp.java package.com .wipro.sample.....	runtime exception: problem with bean ids in beans.xml	
which of the following refers to the ID or name of the Maven project	artifactid	
selecting all names which starts with H, from student entity, which of the following is correct in hibernate	restriction.like	
open in a initialisation of a dispatcher circulate the Framework Looks for a file named dash in the dictionary of your web application	[servlet name] servlet.xml. WEB IN	
which of the following statement is true about depends on attribute in spring	all the above	
when using spring form controls, which of the following attribute is used to bind the data entered in the form with the property of the bean class	bind	
which of the following annotation will help us to map a bean with table in spring JPA	@entity	
command to generate directory structure from a template is	archetype	
which property and value bof hibernate configutation sets hibernate to log all the generated SQL to the console	by setting the hibernate.show_sql to true	
which of the following maven command is used to cleab the files and directories generated by maven during its build	mvc clean
