what is the size of boolean data type	1 bit	
runtime polymorphism is implemented in java using	method overriding	
which of the following is an interface in java.util package	map	
what is the parent class for integer byte and short	java.lang.number	
which of the following is immediate superclass for exception in java	Throwable	
which of the following class is synchronized	Hashtable	
which of the following is correct to pass two command line argument hi and hello to a program called Example java	java Example Hi Hello	
which of the following is the valid import statement to import the static members of math class in java	import static java.lang.Math.*	
which of the following ways is correct to convert a byte into long object	byte b=10; Long d=(Long)b;	
which of the following class stores data as key value pairs	properties	
which of the below keyword is used to throw an exception explicitly	throw	
An object consist of 1. state 2.behaviour 3. identity	1,2,3	
garbage collection in java is done automatically and String is a Final class	both true	
if u need to store user defined objects in treeset which of the following interface should the user defined class implement	Comparable	
which of the following modifier combination is invalid for a method in Java 1. static final 2. static abstract 3. abstract final	1,2,3	
an java interface can extend another java interface and a java class can implement any number of interface	both true	
which of the following statement are true about static members in java	all the statements are true	
which of the following is the extension of the java program when it is complied	.class	
variable declared in interface are by default	public,static,final	
which of the below exception is Checked exception	IO exception	
which of the below exception is an unchecked exception	Arithmetic exception	
integer object can be constructed with	int values	
which of the following statement are true about test suite in junit0	Both option	
what is the size of char data type in java	2 bytes	
which of the following keyword is used to refer the base class members in derived class	super	
Consider the following statements and choose the correct choice: A) java.lang package is automatically imported in all java classes. B) Any number of subpackages can be created under a user defined package.	Both are true	
in junit all methods should be	public	
consider the following statement and choose the correct answer. A)a java interface can extends another java interface B)a java class can implement any no of java interface	Both A and B are true	
which of the following is an ordered collections?	Arraylist	
choose the correct option for function overloading	int show(float x) int show(int x,inty)	
choose the code suitable for line 1 so that the program compiles successfully ( PROGRAMMM)	void speed() {}	
consider the following statements and choose the correct answer; A)User defined class can extend a final class. B)finally keyword is used to marj a class as final in java.	both statements A and B are false	
public abstract class sample{ public static void main(String args[]){ System.out.println("hello world"); } }	Hello world	
class test4{ public static void main(String[] args) { final int x=10; System.out.println(x++); System.out.println("main ends"); }		
; }	Compile time error in line 2 as final	
consider the following statements and choose the correct answer. A)stringBuffer class has reverse()method. B)string class has reverse() method	only statement A is true	

//predict the coutput class test1{ public static void main(String[] args) { try{ int a[]=new int[3]; a[3]=40/0; }
